

Limited-stage SCLC (i.e. stage I-III SCLC eligible for treatment of curative intent)

LLCG/VZN annotations
 1. Anatomic resection + systematic lymph node dissection
 2. Role of PCI unclear. Shared decision making. If no PCI: MRI brain surveillance (q3m during y1, q6 m during y2, then q12m)
 3. In patients with deteriorating PS after surgery, sequential CRT can be considered
 4. If (very) poor PS due to co-morbidities BSC can be considered
